THREE TIER APPLICATION ON AWS

ON SERVER

1.create a instance

1. Name ----------> webserver
2. Ami ----------> ubuntu
3. Instance type -> m7i.flex. large
4. Sg ----------> mysg (http/https/ssh/mysql)
5. Create a instance

2.create a database

1. Engine ----------> MySQL
2. Choose full configuration
3. Username -------> admin
4. Password --------> admin123
5. Create a database

3.access the instance

1. apt update
2. apt install mysql-client -y

4.create a user inside the MySQL

1. mysql -u admin -h <database-endpoint> -padmin123
2. create database student_db;
3. show databases;

5.Access the instance

1. git clone https://github.com/mayurpandit25/EasyCRUD-Updated-df.git
2. apt install openjdk-17-jdk -y
3. apt install maven -y

6.setup the backend

1. cd /EasyCRUD-Updated-df/backend/src/main/resources
2. vim application.properties
   { change username, password & database endpoint }
3. cd /EasyCRUD-Updated-df/backend/
4. mvn clean package
5. cd target
6. java -jar student-registration-backend-0.0.1-SNAPSHOT.jar

7.setup the frontend

1. cd /EasyCRUD-Updated-df/frontend/
2. vim .env
   VITE_API_URL=http://<public_ip>:8080/api
3. sudo apt install nodejs npm -y
4. apt install apache2 -y
5. systemctl start apache2
6. npm install
7. npm run build
8. cp -rf dist/* /var/www/html/
9. systemctl restart apache2

8.<public_ip> ----------> hit on web

ON LOCAL

1.On Local ubuntu terminal

3. apt update
4. apt install mysql-server -y
5. systemctl start mysql
6. mysql
7. create database student_db;
8. CREATE USER 'admin'@'localhost' IDENTIFIED BY 'admin123';
9. GRANT ALL PRIVILEGES ON student_db.* TO 'admin'@'localhost';
10. FLUSH PRIVILEGES;
11. mysql -u admin -h localhost -padmin123

2.DEPLOY PROJECT

1. git clone https://github.com/mayurpandit25/EasyCRUD-Updated-df.git
2. apt install openjdk-17-jdk -y
3. apt install maven -y

3.setup the backend

1. cd /EasyCRUD-Updated-df/backend/src/main/resources
2. vim application.properties
    1. username -> admin
    2. password -> admin123
    3. database endpoint -> localhost
3. cd /EasyCRUD-Updated-df/backend/
4. mvn clean package
5. cd target
6. java -jar student-registration-backend-0.0.1-SNAPSHOT.jar

4.setup the frontend

1. cd /EasyCRUD-Updated-df/frontend/
2. vim .env
    1. VITE_API_URL=http://localhost:8080/api
3. sudo apt install nodejs npm -y
4. apt install apache2 -y
5. systemctl start apache2
6. npm install
7. npm run build
8. cp -rf dist/* /var/www/html/
9. systemctl restart apache2

5.To check application

{ localhost }

6.To check the backend servers

{ localhost:8080/api }
