HEADLAMP

What is HeadLamp

Headlamp is a modern, extensible Kubernetes web UI developed by the Kubernetes SIGs that offers deep visibility into cluster resources, RBAC, CRDs, and multi-cluster environments, designed for day-to-day DevOps and production use.

INSTALLATION OF HEADLAMP

1. **create a EKS cluster**

2. **Install headlamp using helm**
    1. helm repo add headlamp https://kubernetes-sigs.github.io/headlamp/
    2. helm install my-headlamp headlamp/headlamp --namespace kube-system
    3. kubectl get pods -n kube-system -w

3. Create a service-account
    1. kubectl create serviceaccount headlamp-admin -n kube-system
    2. kubectl get sa -n kube-system

4. Grant admin rights

kubectl create clusterrolebinding headlamp-admin --serviceaccount=kube-system:headlamp-admin --clusterrole=cluster-admin

5. Create a token
    1. kubectl create token headlamp-admin -n kube-system

6. Forward the Headlamp service
    1. kubectl port-forward -n kube-system svc/my-headlamp 8080:80 --address=0.0.0.0 &
    2. { http://<PUBLIC_IP>:8080 }
