UPGRADE KUBERNETES CLUSTER WITHOUT GETTING DOWNTIME

STEPS

1. control-plane
2. addons (kube-proxy/CodeDNS/VPC CNI)
3. Node Groups
4. upgrade the workloads

Control plane → Add-ons → Node groups → Workloads validation

UPGRADE FROM 1.35 TO 1.36

1. kubectl create deployment nginx --image=nginx
2. kubectl get pods
3. kubectl get pods -A
   (Take the screenshot of the output)
4. kubectl get nodes
   (Take the screenshot of the output)

1. Upgrade the control plane

1. click on cluster
2. select the latest version 1.36
3. then upgrade

2.Upgrade EKS addons

1. click on addons
2. click on kube-proxy
3. upgrade to latest
4. save changes
   { same for the amazon vpc cni / codeDNS }

Check addons using cli

1. aws eks describe-addon --cluster-name <CLUSTER_NAME> --addon-name kube-proxy
2. aws eks list-addons --cluster-name <CLUSTER_NAME>
3. kubectl get pods -n kube-system

3.Upgrade the node groups

1. kubectl get nodes
2. click on cluster → Compute → Node groups
3. click on upgrade now
   1. select the update node group version
   2. update strategy -- Rolling Update
4. update

4.Watch the Node Upgradation

1. kubectl get nodes -w
2. kubectl get nodes -o wide

4.Verify the Pods

1. kubectl get pods
