IMPORTANCE OF SUDO

WHAT IS SUDO

Sudo is a super user do permission it allows you to temporarily elevate your current user account into root privilege.

1.Sudo means a "**Super User Do**"
2.It allows a normal user to run commands with superuser (root) privileges.
3.Used for administrative tasks like installing, updating and changing the system files
4.It simply provided u the temporary access to run the root user commands
5.Example: - **sudo apt install nginx**

Note: -

1. Only users listed in /etc/sudoers or sudo group can use sudo Command

---

1st Method (add user in the sudoers file): -

1.vim /etc/sudoers
```
# User privilege specification
root    ALL=(ALL:ALL)    ALL
mayur   ALL=(ALL:ALL)    ALL        ----------> Add this line below root
```

2.su – mayur
```
sudo apt update
```

CLOUDBLITZ

2nd Method (add user into the sudo group): -

1.cat /etc/group | grep sudo
```
sudo:x:27:
```

2.gpasswd -a mayur sudo

3.cat /etc/group | grep sudo
```
sudo:x:27: mayur
```

ARCHIVING AND COMPRESSION

WHAT IS ARCHIVING

1. Archiving simply means combining multiple files & directories into a single file.
2. It does not reduce the file size, it just groups files together.
3. Used especially when dealing with backups and data transfer.
4. Command (tar –> tape archive): -
   {tar -cvf archive.tar file1 file2}
   {tar -xvf archive.tar}
   - c – create
   - v – verbos (showing the output)
   - f – filename
   - x -- extract

WHAT IS COMPRESSION

1. compression means reducing the size of the file
2. It makes files smaller to save space and transfer faster.

Common Compression Tools in Linux

- **gzip (z)** ----------> fast, less compression
- **bzip2 (j)** --------> medium compression
- **xz (J)** ----------> highest compression, slower

CLOUDBLITZ

1.gzip

1.To compress a file
gzip file

2.To uncompress a file
gunzip file.gz

2.bzip2

1.To compress a file using bzip2
bzip2 file

2.To uncompress a file
bunzip2 file.bz2

3.xz

1.To compress a file using xz
xz file

2.To uncompress a file
unxz file.xz
